Based in California, Fotopod Booth has been specialising in providing professional photobooth services for 11 years. Led by its owner and chief designer Tu A. Le, the company has wide appeal across photography, event, and corporate industries as it consistently pushes the boundaries of photobooth technology. Set to reach the market this year is a groundbreaking new concept called the 360°ORB, an innovative photobooth technology with the ability to capture 360° video footage. Fotopod’s collection features a variety of booths and accessories that cater to an array of events and requirements, including the v2 Original and its v4 Nano Pod counterpart, the v5 Foto Mirror, v6 Lux Mirror, and the LED Hashtag Printer. These products all come with remote tech-support functionality, no additional fees, and are developed with military-grade materials that are built to last.

Marking Fotopod as an industry leader, its 360°ORB booth introduces a number of leading features, adding to a range that has already taken photobooth technology to the next level. The 360°ORB has the industry’s first dual-controlled white plus RGB 360°-pixel tube LED DMX, exquisite lighting controlled by smart-app technology, and a top mounted modular planetary motor design that’s patent-pending. Tu A. Le has worked on cutting-edge projects for a number of years, possessing more than 20 years of experience in the high-end creative visual effects industry where he held senior roles at major Hollywood studios including Disney, Sony, and Lucasfilm. The business has starred at more than 5,400 events thus far, taking them to the next level by supplying these unique booth set-ups with innovative technology.

“
SET TO REACH THE MARKET THIS YEAR IS A GROUND-BREAKING NEW CONCEPT CALLED THE 360°ORB, AN INNOVATIVE PHOTOBOOTH TECHNOLOGY WITH THE ABILITY TO CAPTURE 360° VIDEO FOOTAGE.
”

The judging panel was particularly impressed by the 360°ORB’s user-friendly design. Fotopod’s team has developed a dynamic counterbalance weight system, ensuring genuine stability, and a 360° spinning armature. It’s designed to immediately disengage when contacting an object – such as an unaware guest – ensuring their safety at all times. Furthermore, there won’t be any loose leads and cables filtering from the booth as its fully-powered by a Lithium Power Station. Fotopod offers on-going software support with all rentals and purchases of its photobooths, ensuring customers can maximise the technology’s potential. In addition, the company offers worldwide shipping on its entire range.
